Create storyboards to represent the user flow for your application using Balsamiq

Aim

To design and prototype a user-friendly wireframe for a Doctor Appointment Booking Application using Balsamiq, representing the complete user workflow in a single combined view.

Tools Used

- Balsamiq (Wireframing Tool)

Description

This project presents a doctor appointment booking application interface designed using Balsamiq. Similar to the cinema booking system, all major steps of the appointment process are combined into a unified storyboard view.

The wireframe includes doctor browsing, doctor details, slot selection, and payment & confirmation. This helps in clearly visualizing the complete user journey from selecting a doctor to confirming an appointment.

Explanation of the Wireframe

The combined wireframe represents the full workflow of the doctor appointment booking application:

1. Home / Doctor Listing Section

- Users can browse available doctors
- A search bar allows users to quickly find doctors by name or specialization
- Each doctor is displayed in a card format with:
- Name
- Specialization
- Rating
- Each card contains a **"Book Appointment"** button

2. Doctor Details Section

- Displays detailed information about the selected doctor:
    - Name
    - Specialization
    - Experience
    - Rating
    - Consultation fee
- Provides a clear overview for decision-making
- Includes a "Select Slot" button to proceed

3. Slot Selection Section

- Displays a calendar interface for date selection
- Users can choose available time slots (e.g., 10 AM, 12 PM, 3 PM)
- Selected slot is highlighted for clarity
- Includes a “Proceed to Payment” button

4. Payment & Confirmation Section

- Displays appointment summary including:
    - Doctor name
    - Date and time
    - Consultation fee
- Provides payment options such as:
    - UPI
    - Card
    - Wallet
- Final confirmation is done using “Confirm Appointment” button
- Displays confirmation message after successful booking

Flow of Events

1. User searches or browses available doctors
2. Selects a doctor from the list
3. Views doctor details
4. Selects date and time slot
5. Proceeds to payment
6. Confirms appointment and receives confirmation

Conclusion

The combined wireframe effectively represents the entire doctor appointment booking workflow in a single view. It improves understanding of user interactions across different stages and helps in designing a smooth and efficient healthcare booking system.

3. **Seat Selection Section**

- Shows seat layout with available and booked seats
- Users can select seats and view total price
- Option to proceed to payment

4. **Payment & Confirmation Section**

- Displays booking summary and total amount
- Provides payment options (UPI, Card, Wallet)
- Booking is confirmed with a ticket preview

Conclusion

The combined wireframe effectively represents the entire movie ticket booking process in a single view. It helps in understanding the flow of the application and user interactions across different stages, making it easier to design and develop a user-friendly cinema booking system.
